## Technical Information

A comparison of the aberrations introduced to a  $\lambda/10$  Stemmed Mirror and a  $\lambda/10$  First Surface Mirror when mounted in a kinematic mount. As shown, a Stemmed Mirror stays within  $\lambda/10$  specification up to 12 inoz of torque ("hand-tight") while a First Surface Mirror becomes out of specification with a surface flatness of  $\lambda/5$ .

**Stemmed Mirrors** are mounted to kinematic mounts by a **stem** on their back surface, resulting in no contact with the edges of the mirror surface.
